

Using other programs

To use `1player.py`, you use it the same way pressing O works in the main program.

`2play_repeated.py` will keep repeating the melody you select. This allows you to record chords first, play them in the background in another black window, and open up the piano and play with the melody that will go to those chords.

To use `2player_repeated.py`, first you use it in the same way, and then you give it an integer value of seconds between repetitions, because the recording stops in the instant you pressed the last note in the recording, and so the next iteration of the melody would start immediately. E.g. type 1 and press enter to get a 1 second delay between the last melody ending and the next one starting.

To use `3melody_joiner.py` just follow the instructions.

The point of `4player_transpose.py` is to play the melody but shift the scale to the left or right of the original one. This way you can see how that same melody would sound in other scales. Unfortunately, the change from major to minor isn't supported.

To use `4player_transpose.py` just follow the instructions.
